

Bryncethin Primary School, Bridgend

Every school dreams about enhancing their teaching and learning facilities, but with the added technology comes the responsibility for maintenance. Projector Services UK understand this and can take the pain away with their three tiered service packages, designed for a schools specific needs and budget.

Kay Cheater, the ICT Coordinator of Bryncethin Primary School in Bridgend, South Wales was tasked with managing the schools two new ICT suites, which are complete with more than 40 PC's, and every classroom which is equipped with, amongst other things a SMART Board™ interactive whiteboard.

The introduction of the new technology into the school had been planned and delivered to a very high standard. However in preparation for an upcoming Estyn, Kay recognised the need to ensure that all multi-media equipment was serviced and fully functioning.

The Head Teacher, Mrs Wood contacted Projector Service UK and following a consultation to assess the schools individual needs, PSUK were able to provide them with the gold level service and an engineer's full report, enabling Mrs Cheater to concentrate solely on teaching and learning. This level of service also included the installation of new SMART Gallery content which can be time consuming when you have a SMART software on every PC as well as carrying out running repairs to classroom teaching equipment.

The PSUK Ltd gold level service, the recommended service for schools facing an inspection, helped the school pass their Estyn inspection and receive positive comments in their report about the school's technology choices and their seamless introduction into Bryncethin Primary School.

At a fixed cost of approximately £40 per room, PSUK are here to help you too. A qualified and friendly engineer will attend your school, carry out an initial site survey and complete classroom health check.

PSUK will then compile a report on your equipment and schedule two further visits within a twelve month period at times convenient to you, in order to carry out a complete 26 point projector service, 5 point projector service and installation component service.
